free,electrical design estimating and costing pdf free.The sharp decline in world oil prices has put the
brakes on European carmakers. Diesel engines now costlier, so it becomes harder for them to
compete with the diesel-run engines in European sedans. Of course, the gas-burners, which deliver
more engine output, don't come cheap either. They are much pricier than modern diesel engines,
but their fuel efficiency is better. The new reality is gas engines are expensive but diesel engines are
more efficient. There is a problem. Gas engines are heavier than their diesel counterparts, the
Nordea analyst has found. In a new report, he points out that heavier gas engines also require higher-
capacity turbochargers, which are much more costly than their diesel counterparts. Consequently,
there is a trade-off between gas power and fuel efficiency. At present, people who want high fuel
efficiency in their cars pay for the gas engine. But the new reality in Europe is that they can only get
the more economical diesel engine instead. One of the reasons why the Volkswagen group, for
example, is now aggressively advertising the diesel engines in its compact cars is because it was
allegedly caught with a defeat device in the software in some of its 2.0 litre engines. The cost of
diesel engines has come down, but there is no corresponding fall in their price in Europe, especially
in the compact segment of the car market. Europeans who buy a cheap but efficient gas engine in
one of the popular compact cars can end up getting a very expensive car in the long run. That is why
the German carmakers are losing money on their engines in Europe. And that is where their troubles
come from. Subscribe to Mint Newsletters * Enter a valid email * Thank you for subscribing to our
