and Starwhale end up in a battle with a firey and powerful whaler named Black Unicorn for conquering 3e universes and Starwhale as just observed ("Starwars GQ is a Galaxies Quest for collecting all the characters available in Star Wars (films & comics) source games, novels, cartoons, and entertainment products. This challenge and hide-and-seek game is composed of unique planets and an independent galaxy [guests bar, races, and governments]. However, people are to follow the law of the space traveler: stay or move, but don't kill each other," That question is one of numerous topics they are in charge of covering in their 3e RPG () A small but important (and not in a PQA sense!) detail made my week: Entering shipwrecks at night may need torches Finding a door in the dark is easy (you know where you left the door!), but if it's a lightless hatch you may not be able to find it. A shipwreck at night with no light may make a perfect, risky hide and seek for your ship. You will have to use all your wits and muscle power to make sure you identify that hatch when the rust calms down. Arrogant! It would be great to use torches in the spacecraft halls, but I did not find one in the code of my ROM (is it in a forum somewhere? Maybe on a website?), so I cannot answer what that might be. I only know that I never tested that. ~~ So make use of the stars and open the hatch before anyone finds you. I think that's about it... after playing the game for the first time, I am not spending my free time hanging around the flight computer to know what planets are colonized. I have such a complex feeling of oppression just thinking about all you guys to come back to Old School 2.0. Ah! And even though I may or may not focus on the latest big RPG news for a period of several weeks, I will always remember how enjoyable the making was. I really enjoyed the opening image we see this morning: Isn't it beautiful? ~~ I tried to envision it as "the first impressions

Q: Why does ion-storage work in ionic 3 but not ionic 4? Ionic 3 documentation says Ion Storage exposes standard browser APIs for persisting data. Ionic 4 documentation says The documentation tool, ionic docs, attempts to ensure that all APIs in the documentation meet the observable interfaces of both Ionic and Angular. Once upon a time I was ready to give up on ion-storage but after getting it to work on ionic 3 I wasn't sure what was going on. As posted here, when posting data from ionic 3 to ionic 4, you need to add some code let messages = []; for (let a = 0; a
